

Security Management

Index by Topic

Articles in the following index to *Security Management* were published during 1983. Copies of articles may be obtained individually through University Microfilms (see below) or by purchasing the issue in which the article appears from ASIS Headquarters.

To obtain any back issue from 1983 or previous years, send \$3.00 per issue plus \$1.50 shipping and handling per

January 1983—December 1983

order to the Accounting Department, ASIS, 1655 North Fort Myer Drive, Arlington, VA 22209.

Articles published in *Security Management* before January 1981 are also available in several reprint series. A catalog, available from ASIS, describes this series and other publications available through the Society.

Minimize the danger of transit by vehicle.

SSDD has developed the most extensive Executive Protection Driving Program in the world. Conducting programs worldwide has made SSDD the leader in its field.

Also available is SSDD's Consulting Service for security vehicles.

The 1st quarter of '84, we will be conducting programs in the following places: Colombia, S.A.; Texas; California; and Florida.

Cost per student: \$1850.00 U.S. dollars—for program only.

Please note our new address:

SSDD, 10 High Street, Suite 13, Medford, MA 02155.

CRIMINAL INTERROGATION AND BEHAVIORAL ANALYSIS INTERVIEWS

A Specialized Course
presented by

JOHN E. REID AND ASSOCIATES

Internationally Recognized Polygraph
And Interrogation Experts

This specialized course has been attended over the past 10 years by thousands of private security and law enforcement personnel. The proven success of our graduates has established the reputation of our course as the premier training program in the art of "Criminal Interrogation and Behavioral Analysis Interviews."

The primary topics are:

THE NINE STEPS OF CRIMINAL INTERROGATION

A step by step approach on how to confront the suspect, develop a theme, handle denials and offer alternatives to stimulate the confession

BEHAVIORAL ANALYSIS INTERVIEWS

A structured non accusatory interview designed to identify the innocent and isolate the guilty

BEHAVIOR SYMPTOM ANALYSIS

How to interpret a suspect's verbal and non verbal behavior for indications of truth or deception

THE LEGAL ASPECTS OF INTERROGATION

In 1983 Reid and Associates offers a five-day course each month in Chicago. If you are unable to attend the 5 day course, Reid and Associates can present a course at your location.

FOR INFORMATION: Return this coupon, or call Joseph P. Buckley at (312) 782-2100.

TOTAL SAFE AND VAULT PROTECTION

The Series S3800 Seismic Detector can single handedly out perform all devices you are currently using for safe, vault and night depository protection. The detector responds only to oscillations in the protected area surface and not to normal environmental activity.

It provides excellent sensitivity to all forms of break-in activity while attaining false alarm free operation. Plus . . . trouble free day and night monitoring capability.

The Series S3800 has been field proven to be effective against attempts using explosives, striking tools, drill, *PLUS* thermal lances and torches.

Contact Arrowhead for further product details.

PUT YOUR FORCE ON COURSE.

Now there's a cost effective, universally applicable basic training program for the private security officer. Private Security Training Institute's slide and videotape courses have been produced by security training professionals. And unlike most programs, which are merely watered down versions of public law enforcement programs, the P.S.T.I. courses specifically address your needs, from basic security techniques to human relations, and more.

We can also customize one of our current programs for you or design a program for your very specific needs. Because we are a division of a nationally recognized full service security firm, we can also provide a complete line of security training consulting services.

For more information or a brochure, contact Mr. Scott Edmonston, CPP, Director.

Vandalproof Access Control!

Nothing to attack... not even a slot to jam. Schlage Electronics Access Control Systems frustrate vandals because they operate by "Proximity," a non-contact card reading technology proven in over 10,000 installations worldwide. Access is gained by presenting a credit-card size Command Key within two to four inches of a sensor, encased in rugged, weatherproof Lexan®. The Command keys are guaranteed for five years.

What's more, the sensor does not attract attention to itself. In fact, it can be surface mounted, attached behind glass, or even totally concealed within a wall.

In addition, our newest Proximity Systems are fully compatible with, and programmable by, alarm central stations. They also solve the problem of false alarms caused by inno-

cent employees, with an exclusive "Night Mode" feature. In Night Mode, when the alarm system is armed only people authorized to deactivate the alarms are allowed in. When such an authorized person uses his Command Key, the system disarms the alarms and then lets him in. Unauthorized people, however, are kept out as long as the alarms are armed.

On top of that, Proximity Systems provide another unique feature called "Access Code." Each employee can be allowed individual access to different areas at different days and times. And, the system allows for holidays and shut-down days.

For more information about Proximity Access Control Systems, and a copy of our new Executive Guide to Access Control, call or write today.
